

Create Contact Form with Custom Fields and Validation

1 Open Dashboard and Click on "Add New"

The screenshot shows the WordPress dashboard interface. On the left, the 'Contact Forms' menu item is highlighted with a red circle, and a sub-menu is visible with 'Add New' also circled. The main content area displays a 'WP Rocket' notice, a 'Hello!' message from Brizy, and a 'Quick Draft' section with fields for 'Title' and 'Content'. The 'Contact Forms' menu item has a red badge with the number '1'.

☒ Use this text as the placeholder of the field

Akismet ☐ This field requires author's email address

Id attribute

Class attribute

[email* email class=form-control placeholder "Email Address"]

To use the value input through this field in a mail field, you need to insert the corresponding mail-tag ([email]) into the field on the Mail tab.

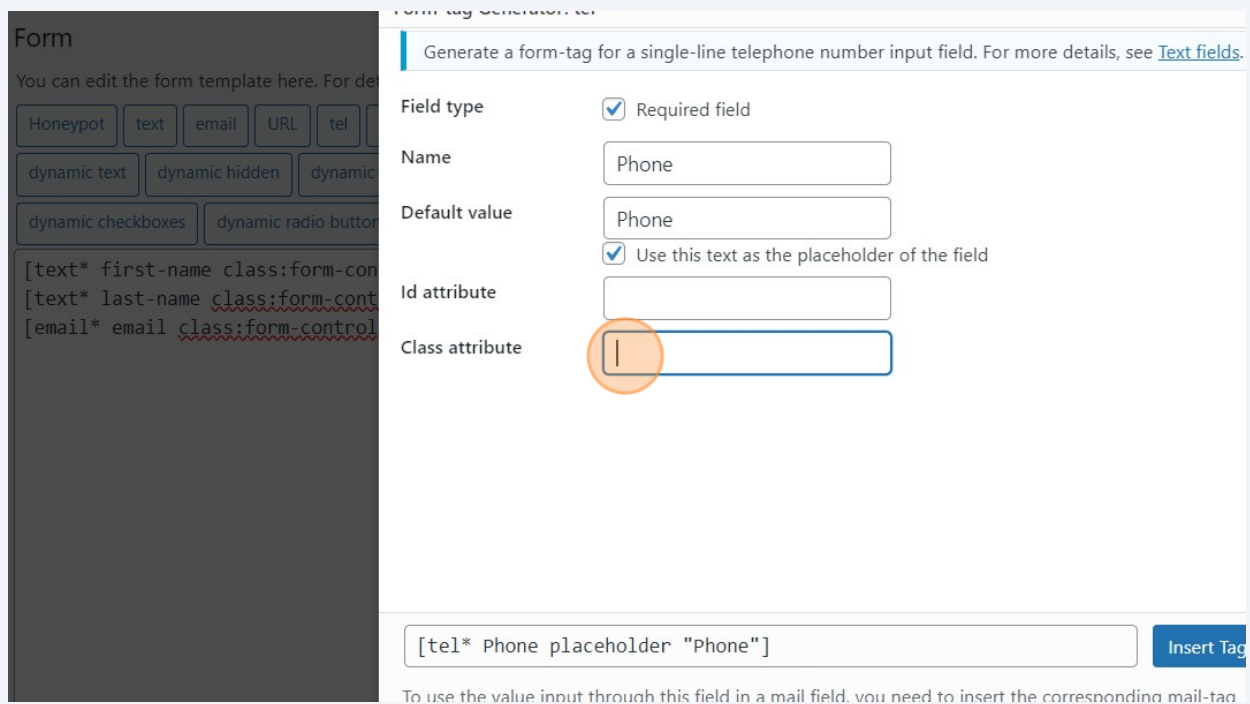

8 Click on "tel" for add "Phone Number"

The screenshot shows the WPForms 'Form' tab. The 'tel' field type is highlighted with an orange circle. The form template code is displayed below the field type grid:

```
[text* first-name class:form-control placeholder "First Name"]  
[text* last-name class:form-control placeholder "Last Name"]  
[email* email class:form-control placeholder "Email Address"]
```

9 Click On the "Name" field and give the "Name" as per your field, and Click on the "Required field" field, for make the field required and Click on "Use this text as the placeholder of the field" for make the default value as the Placeholder and Click on the "Class attribute" field and give the Class Name "form-control"

The screenshot shows the WPForms 'Form Tag Generator' for a 'tel' field. The 'Required field' checkbox is checked, and the 'Use this text as the placeholder of the field' checkbox is also checked. The 'Name' field is set to 'Phone', and the 'Default value' is set to 'Phone'. The 'Class attribute' field is highlighted with an orange circle. The generated form tag is displayed at the bottom:

```
[tel* Phone placeholder "Phone"]
```

To use the value input through this field in a mail field, you need to insert the corresponding mail-tag

10 Click on "Insert Tag"

Generate a form-tag for a single-line telephone number input field. For more details, see [Text fields](#).
